PHP Pro Bid V6
UPGRADE GUIDE

> ❗ **Please note:**- You must be running V5.25 in order to upgrade to PHP Pro Bid V6. If running an earlier version we recommend incrementally updating from your current version to V5.25. All of the incremental updates can be found in the "Download Updates" section of the client area.

a Upload all files included with the kits and overwrite any existing files when prompted

b Set the following files/directories to **CHMOD 777**:-

- /includes
- /cache
- /language (all files inside the language directory)
- /uplimg
- /images/probidlogo.gif
- online_users.txt

c Delete the existing /config/config.php file

d Run the installer which will load when you visit your site. On-screen guidance is available to ease you through the upgrade process. However it is imperative you select the "Upgrade from V5.25" option from the installation type section of the installer.

e Once the installer is successfully completed delete the /install directory from the ftp

f Set the /includes folder back to CHMOD 755

g Login to your admin area and re-generate your categories:-

- Login to admin area
- Go to "Edit Categories"
- Click on the "Save Changes" button and follow the instructions that will appear in the red banner at the top of the page
- Once run re-visit "Edit Categories" and click on the "Generate Categories button"

h Run the following in your browser to re-sync the category counters back to their true value:- http://www.your-site-here.com/initialize_counters.php
